

Bill4Time Desktop Mac & PC Updates!

Bill4Time has released many updates to the Mobile & Desktop applications recently including the new macOS download!

The Desktop application allows you to track time and expenses both online & offline. If you track time offline, the application will store the entries and automatically upload the data to the program as soon as you have an internet connection. You can also view Client information, Projects, recent entries, and Balances. Add Clients and Projects from the desktop application and have it sync to and from the program!

To download the applications, log into Bill4Time and click the “Downloads” link at the bottom of any page. From there, choose the PC or Mac download option.

With the Bill4Time Desktop Application, managing your data has never been so simple!
