

Tip of the Week: Bill4Time Multi Timer

Using timers to track your billable time is a simple and convenient way of capturing your hours. There are many ways to utilize timers in Bill4Time, for example, on a new billable entry and on your mobile or widget applications. What you may not know is that there are many benefits of using the Multi Timer feature in the program itself.

At the top of any page you will notice a small clock icon. This allows you to create as many timers as you need. Once you click the Create Timer option it allows you to fill in a Client, Project and further details, but if you choose not to fill those in at that time, you can click to start a blank timer.

The benefits of using the multi timer is that the entries are built into the server so if your browser closes, power goes out, computer shuts down, etc., these timers will never stop running until you pause or save them in the system.

Another added bonus is that if you start a timer from one location, go to a different location and sign into the program, you still have access to these timers no matter where you go. Never miss another minute of billed time with the Bill4Time multi timer!
